Want to build video games this summer?!

Join us for our fourth virtual computer game coding camp! This virtual camp is for high school students on the autism spectrum (ASD). The camp will expose students to high-level video game design and development and provide opportunities for networking with peers. While developing their video game, students will improve their teamwork skills such as communication and collaboration. Throughout the camp, campers will learn the high-level processes of software development, game development, interpersonal communication, collaboration, and end up with their own game, from scratch.
